

Recommendations to WGISS before WTF-CEOP Project Team Closing

Satoko Horiyama MIURA/JAXA

Recommendations (1/2)

➤ JAXA Prototype System

- To continue its operation as long as possible
- To continue its efforts to find the solution on transition
- To register “Lessons & Learned (including data quality issue)” to GEOSS Best Practice Wiki, if WGISS feels it appropriate ? And to CEOS Best Practice

Recommendations (2/2)

➤ NASA Prototype

- The OPeNDAP Group's Hyrax Server is publicly available for download; The WCS Handler will also be publicly available for download (soon).
- The WCS Server with L2 AIRS data – future uncertain; potential for Goddard data center to support operations
- With OPeNDAP's Hyrax server & WCS handler, and using the WCS Server Lessons Learned document, an organization can install own WCS server with satellite data for access by OPeNDAP enabled clients
- WCS Lessons Learned document and the CS/W and WCS Interoperability document will be registered with the GEOSS Best Practices wiki
- All three documents produced by NASA team will be submitted to the NASA Standards Process Group as Technical Note RFCs.
